

Evidence layers in the analysis

1 DELB

Meaning: Integer-MSE floor

From: Entropy and integer-lattice envelope

Supports:
Assessment of floor change

2 CMI + randomization

Meaning: Added information

From: CMI and matched references

Supports:
Evidence beyond finite-sample bias

3 Known-truth experiments

Meaning: Bias and power

From: Injected CMI and replicates

Supports:
Detectable effects

4 Held-out MSE + Gap

Meaning: Realized model error

From: Test MSE and paired DELB

Supports:
Realized opportunity

The four layers answer related but different questions.
